

Crude Oil Desalting & Dehydration

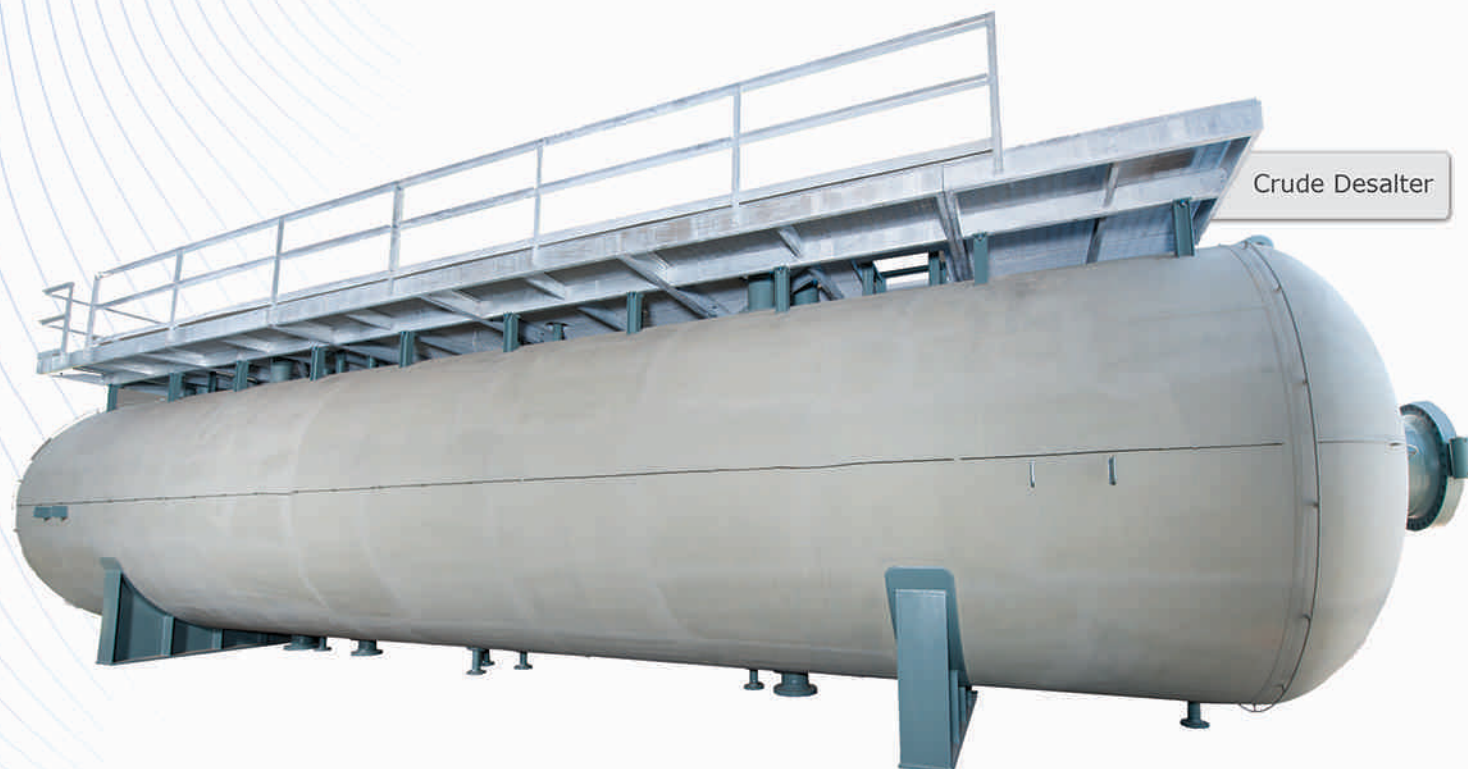

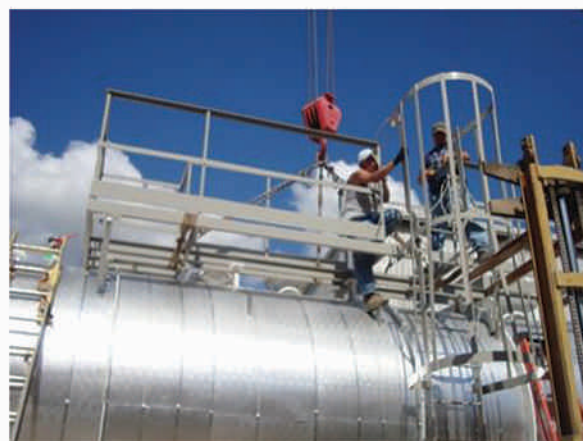

CPPE's designs and fabricates crude oil desalters that are engineered to remove salt and water from crude oil, This is to prevent corrosion, plugging, fouling of equipment and poisoning of catalyst in processing units.

Application:

- Crude oil dehydration and desalting in oil fields and oil refineries

Feature:

- Automations
- Low maintenance
- Robust material
- Modular components
- User serviceable under proper maintenance
- Remote monitoring & control

Crude Desalter
